

At home size guide...

Please print this guide at 100% and make sure the line below measures 5cm!

1. Place your child's foot on the heel guide and simply measure to the longest toe.
2. If your child is between lines simply size up to the next line.
3. With a pencil, mark the size of that foot on the sheet.
4. Many people have one foot larger than the other, it's perfectly normal! Make sure you measure both feet and use the larger result.
5. For kids shoe sizes 3.5-5 please add 4.25mm per half size to the top of the chart.

For best results your child should be in a standing position so the foot is naturally spread.
